and command the power of a fully-integrated small business communications system with big business data-access capabilities

and Go...

and take your business as far as your dreams allow.

Take your busi

Always On Call.

The InfoSet 408 telephone system not only gives you control over your world of communications, but also provides invaluable data-access support. The optional Integrated Voice Mail System is equipped with an auto attendant feature that handles all calls, conveys information and keeps your business open 24/7. Customizing individual voice mail and messaging is also a snap. So is separating business and personal calls with your choice of distinctive rings. When time is tight, employees can decide just whom to talk to with Caller ID — at every desk with a digital phone — or let voice mail take a message.

Watch Productivity Skyrocket with These Powerful Business Boosters.

Firing up the InfoSet 408 system on a high-speed access — such as Asynchronous Digital subscriber line, or ADSL — ensures that information moves in and out of your office at a rapid, time-saving pace. With Computer Telephony Integration (CTI) support*, employees can combine the power of phones and computers to improve service and exceed business goals. It's also easier to create a more organized working space. Once your PC/printer, office tools and any data devices are networked, InfoSet lets you manage them all within a

*D^{term} only.

As the Internet expands the boundaries of communication, technology soars over barriers. High-speed connections and voice/data advances accelerate what's possible to near unimaginable levels. And, it's not exclusive to big business. With the InfoSet 408 telephone system from NEC, small businesses can also reach further, get there faster and be more efficient.

Until now, small phone systems denied users simultaneous Internet access on one line. But the InfoSet 408 telephone system delivers multiple high-speed access to multiple business desktops. It then integrates that access with the power of affordable voice/data integration. The result is one centralized, cost-effective, data-access platform that many share company-wide.

A variety of cost-competitive NEC terminals extend productivity at the desktop.

ness further, faster

friendly and familiar Microsoft® Windows® environment. Plus, if your business happens to be home-based, InfoSet's Home Phone Line Networking (HPNA) technology lets you add your personal phone lines to your business network — so you can have high-speed access not only in your office, but around the house, as well.

The voice/data versatility of the InfoSet 408 system makes it valuable to many businesses — restaurants, warehouses, home offices, retail stores, professional and legal offices, architectural firms and more. Achieve

better customer service through faster credit card processing. Download and upload complex files and images with greater speed and convenience. Never miss another important call, with intercom paging capabilities. You can even use InfoSet to build more business by announcing current ads and promotions, operating hours and directions on hold — or just play relaxing music. Another cost-saving benefit is long-distance call tracking to verify account charges. For added safety and security, you can even monitor and control your front entrance right through your phone. InfoSet does it all and much more.

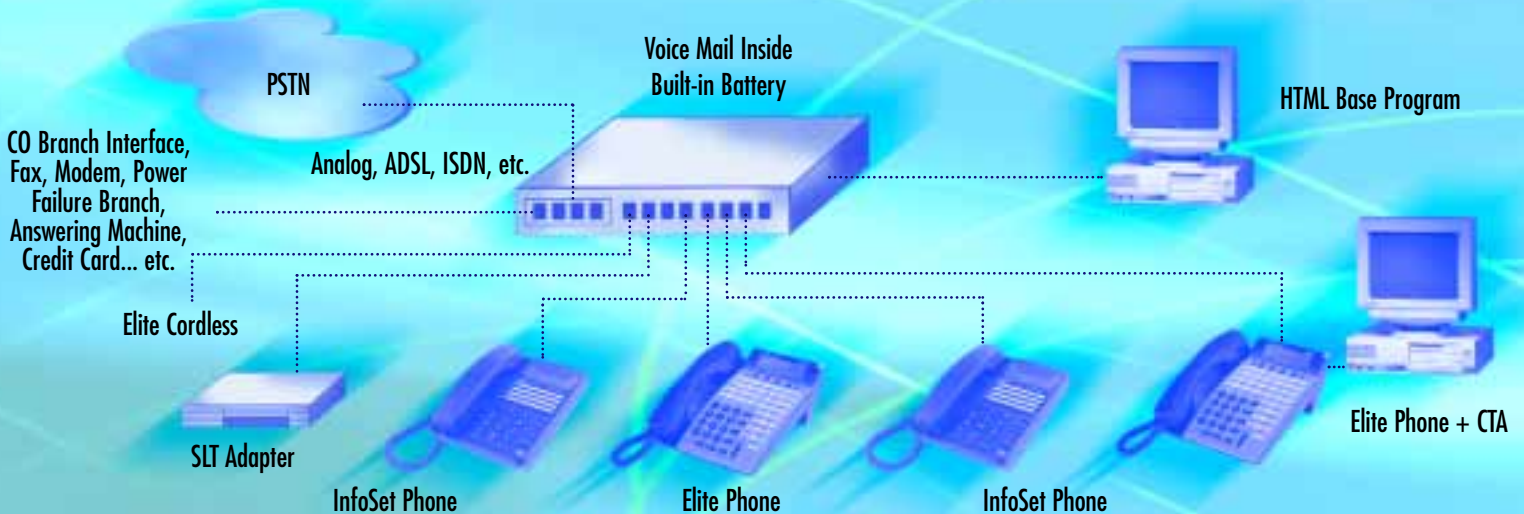

Fast and Easy Entry.

InfoSet can be fully pre-packaged when shipped, so it's easy to purchase and install. No special tools or complex wiring are necessary. Plus, for any maintenance, the InfoSet 408 system uses HTML PC-based programming, so you can find just about everything you need right through your own Web browser.

Built for Today, Engineered for Tomorrow.

The InfoSet 408 system is ready to ride the broadband wave of the future. It's also flexibly and conveniently engineered for whatever secured high-speed transport mode you prefer — DSL, ISDN or Cable Modem. InfoSet helps your small business take off by increasing Web access, improving data communications and increasing productivity — all in a simple-to-use, highly affordable, all-in-one integrated system. Plus, it's backed by the proven reliability and quality of NEC — a leader in communications since 1899.

Quick connections.
